

Secure Networking Solutions

PCI Compliance At-A-Glance and what is expected of you.

PCI Compliance includes ensuring the following are incorporated into your network:

Data Network and Security Controls:

- Implement a stateful inspection firewall on each public network connection
- Password implementation and restrictive network access
- Encrypting, truncating, masking and hashing cardholder data (PAN)
- Encrypting cardholder data across a public network (including Wi-Fi, broadband, TDM, or wireless broadband access)
- Implementing the latest security patches and firmware updates to cardholder data equipment
- Protecting devices used for point-of-sale
- Developing and maintaining secure systems and applications
- Monitoring physical access to data network
- Regularly assessing and auditing the PCI network

Managed Security Services

As your business evolves and requires new systems and applications, your exposure to security breaches increases. Critical system failures, data corruption and compliance laws and standards need to be addressed and monitored. Our Managed Security Services minimize these risks by proactively monitoring your network against security threats on a 24x7 basis.

What are the benefits of Managed Security Services?

- Help implement compliance with many laws and standards, such as PCI DSS, HIPAA, GLBA, ect.
- Proactive, real-time Threat Detection and Response
- Complete configuration, deployment and maintenance
- ISP Remediation
- Online reporting via customer web portal
- Increase employee productivity
- Content Filtering policies
- Wireless Hot Spot Messaging, Guest Wireless
- Rogue Access Point Detection

Wi-Fi Hot Spot

Increase the overall customer experience by offering wireless access while maintaining compliance with our integrated solution. We can help you implement your PCI DSS Compliance Plan with our automated wireless scanning, audit and compliance solutions, making PCI wireless compliance low cost and effortless.
